DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I, claims 1-7, 9-23 and 25-48 in the reply filed on January 24, 2007 is acknowledged.

Reasons For Allowance

The prior art does not disclose or fairly suggest a method for inducing injury to a vasculature in a live animal using ultrashort laser pulses to photodisrupt the vasculature and using three dimensional imaging of the vasculature to spatially localize the target area. Three dimensional imaging is known using techniques like optical coherence tomography and multi-photon laser microscopy as evidenced by U.S. Patents US 6,166,385, US 6,020,591 and US 5,034,613. The use of ultrashort laser pulses is also known for medical procedures, specifically using Ti:sapphire lasers. U.S. Patent Application Publication US 2005/0035305 teaches three dimensional imaging of a tissue sample and using ultrashort laser pulses to ablate layers of the tissue, but does not disclose specific targeting of a vasculature. U.S. Patent 5,785,704 teaches targeting retinal blood vessels with picosecond pulses, but defocuses the laser thus teaching away from a spatially localized treatment. U.S. Patent 6,482,199 teaches the use of ultrashort laser pulses for ablating a cornea, but does not specifically teach targeting the vasculature. U.S. Patent 6,351,663 specifically targets blood vessels in the retina for treatment, but does not teach any pulse duration. The combination of three-dimensional targeting of a vasculature and ultrashort laser pulses focused on a spatially specific area is novel and unique.
